The History of the Jumping Pillow®

The concept of an Inflatable trampoline is a Danish invention known in its native country as a "Hoppepuder" and is almost 30 years old!

In 2001 Connie Skibicki, the co-founder of Jumping Pillows® Pty Ltd Australia, spent many months in Denmark to learn and understand the intricate nature of the product and its installation procedures. Subsequently securing the rights for the product.

Upon her return to Australia, the brand name Jumping Pillows® was born and in May 2003 the very first Jumping Pillow was installed at Cairns Coconut Resort, Queensland.

Through it's success within the recreation market the Jumping Pillows® brand has spread worldwide, starting in Australia and New Zealand in 2003, followed by the United Kingdom, and in April 2005 its introduction into the United States & Canada with an authorised North American dealer. In 2007 South Africa was established. In 2014 the Jumping Pillows® product was successfully launched in China. With the success of the Jumping Pillows® brand, many European dealers are now rebranding their "Hoppepuder" inflatable trampolines with the biggest name in the game: JUMPING PILLOWS®.

Jumping Pillows'® product and trademark are now recognised worldwide and well known for their quality, reliability and their ability to provide hours of fun for many people.

SO WHY CHOOSE A JUMPING PILLOW?

- We are the Original Jumping Pillows® (there are recent copies and imitations of our brand)
- Jumping Pillows is the only brand certified to AUS and NZ Standards AS3533. This is equivalent to Jumping Pillows TUV Standard registration in Europe, which is one of the best known & respected certification standards in the world.
- Indoor Jumping Pillows available.
- We use the highest quality components available to the market for this application.
- Successfully established within Australia and New Zealand for over 12 years with more than 500 installations.
- We carry public liability insurance.
- We are the only company in the world to use safety rubber shock pads under our Jumping Pillow for added safety.*

JUMPING PILLOWS®

A MOUNTAIN OF FUN

- We have over 25 years of worldwide installation knowledge to draw from.
- The Jumping Pillows® registered brand name has been proven to generate business for clients from visiting tourists all over the world and of course New Zealand. Jumping Pillow® installation is a permanent one. It requires some excavation and it usually takes one day to install.

Jumping Pillows® come in a combination of bright colours and different sizes. They are made in pre arranged colour sequence. There is no need on your part for colour selection. However should you wish for your own colour sequence, that's perfectly fine. Most likely used colours are orange, yellow, blue and green. Our PVC manufacturer gives these colours the highest UV rating suitable for New Zealand's climate.

Jumping Pillow® maintenance and running costs are minimal. Electricity cost for the air blower is likely to be between fifty cents and one dollar per day (based on 8 – 12 hours day).

We recommend that activities on all Jumping Pillows® are supervised at all times by: (a) site official(s), or (b) video camera with recording facility and regularly monitored. Installing shades over your Jumping Pillow® will improve it's life span. It is not unusual for properly shaded Jumping Pillows® to last five years plus. Without shades, in the New Zealand climate any PVC fabric from any supplier in the world will find it hard to do the same. At the end of the day usage and UV exposure will be the final factor. Our PVC fabric has the maximum UV protection built in and after many years of trying different fabrics we know we have the best.

When the time comes to replace your Jumping Pillow® (PVC component), it can be done by the customer or our installers. Typically Jumping Pillow replacement takes one day. Our Jumping Pillows® come with 3 years (pro rated) wear and tear warranty as well as a 12 month installation warranty.

Factors that will affect the lifespan of your Jumping Pillow® include:

- UV exposure
- climate and location
- the usage of your Jumping Pillow
- the soil quality of where your Jumping Pillow is situated
- soft fall*

*From the inception of Jumping Pillows® sand has proven to be the best soft fall material for this application. Over the past twenty years plus we have monitored (in Europe, USA, Australia and New Zealand) Jumping Pillows® with different soft falls.

We have found that for overall product performance sand is the best. Surprisingly sand abrasion is a negligible factor when you compare Jumping Pillows® lifespan with different soft fall materials such as: bark, wet pour rubber, foam mattresses etc.

For indoor Jumping Pillows, depending on customer preferences we can use rubber cushions or foam mats.

**CERTIFIED PRODUCT
TO NEW ZEALAND
STANDARDS**

CUSTOM SIZES AVAILABLE

**INDOOR OR OUTDOOR
INSTALLATIONS**

*Pillow's lengths & widths can vary by approx. 200mm

Jumping Pillows - sizes	Jumping Pillows - standard sizes	Soft fall area recommended around Jumping Pillows
JP3	7.90m x 9.00m* (71.10m2)	Min. 1.2m – 2.5m*
JP4	10.85m x 9.00m* (97.65m2)	Min. 1.2m – 2.5m*
JP5	13.80m x 9.00m* (124.20m2)	Min. 1.2m – 2.5m*
JP6	16.75m x 9.00m* (150.75m2)	Min. 1.2m – 2.5m*
JP7	19.70m x 9.00m* (177.30m2)	Min. 1.2m – 2.5m*

Replacement Prices**

*OUR INSTALLATIONS INCLUDE ALL JUMPING PILLOW COMPONENTS: ANCHORING SYSTEM, AIR BLOWER & HOSEING & RUBBER SAFETY CUSHIONS FOR EDGING UNDER JUMPING PILLOWS.

SEPARATING FACTS FROM FICTION

1. If I purchase an inflatable trampoline from someone else, can I call it a Jumping Pillow®?

No, you can't call your inflatable trampoline a Jumping Pillow®. It is a well known trade mark in many countries around the world and you need to purchase the original product, not a copy in order to use the name. Failing to do so, you are exposing yourself to potential litigation and compensation.

2. Some companies selling copies claim they have exclusive and superior PVC fabric to Jumping Pillows®. Is that correct?

There is no such thing as an exclusive PVC fabric others may use. Their fabric is readily available to anyone else. In fact we have been using the same fabric in Europe for the past 7 years. Having used it for so many years in Europe we have not found anything particularly superior about it.

3. Some competitors claim that their installation method has an improved safety aspect. Is that true?

It is quite the opposite. Their installations lack the main safety components like rubber cushions (see photos) and metal triangles which perform very important technical and safety function. Such installations would no doubt fail certification process.

JUMPING PILLOWS INSTALLATION

Includes playground rubber cushions which are certified for critical fall height to NZ Standards.

We also use German PVC strips and galvanized metal triangles for our anchoring system.

Our anchoring system is designed to last for decades

Our PVC strips are flexible when needed and our triangles perform an important technical and safety function.

Our anchoring system makes future replacements smooth and easy.

COPIES AND IMMITATIONS

No playground rubber cushions used - less safety

No metal triangles used - less safety

The whole anchoring system relies on inexpensive timber planks.

SEPARATING FACTS FROM FICTION CONTINUED..

4. Some competitors claim that their PVC fabric when exposed to accelerated UV test performs better than Jumping Pillows fabric. Is that correct?

It is impossible to say as the test data shown on our competitor's website etc. relates to a test done for Jumping Pillows in 2008 by a Belgian PVC manufacturer. Unfortunately it shows a product that our company actually does not use. In general accelerated UV tests are not reliable anyway as they can't show any results for wear & tear properties. They also can't test for any compensating factors should some fabrics have a thicker top PVC layer.

5. Does Jumping Pillow fabric need to have any UV protection applied after purchase?

No. Our fabric has an inbuilt UV stabiliser. It is virtually impossible to find a PVC fabric without it.

6. Does your air blower motor come from China?

No. we use either German or Italian motors.

MULTI & PANNA FIELDS FROM DENMARK

Panna is a new type of football. It is played one-on-one on a small octagonal court with low rebound boards to keep the ball in play.

A game lasts for two minutes. It is won immediately if one of the players executes a clean "tunnel", or Panna, against the other. It is lost immediately if a player kicks the ball directly out of the field. The Panna Field is great for other games as well, ensuring it is fully utilised. Hockey, for example, which becomes even more intense and exciting within the confines of the court.

Multi Field lives up to its name in every respect. It can be used for almost any ball game: football, basketball, handball, volleyball or hockey to name but a few of the exciting sports for which Multi Field is ideal.

Divide the field and share the fun. The Multi Field can be sectioned transversely, allowing several games to be played at once. Such flexibility ensures plenty of fun and enjoyment for ball-control artists of all ages and can be of great benefit when a whole tournament is to be played in the course of a day.

Spectators can also enjoy the added excitement of watching several activities at once.

Good Reasons for Choosing Panna and Multi Fields

The latest "must have" from Europe

- Enjoyed by all ages
- Made in Denmark
- Practically indestructible
- Shock absorbing surface*
- Enjoy: soccer, basketball, hockey, touch footy and more...
